

Difference Between JPA, Hibernate, and Spring Data JPA

Feature	JPA (Java Persistence API)	Hibernate	Spring Data JPA
Type	Specification (Standard API)	ORM Framework (Implementation of JPA)	Spring module built on top of JPA
Purpose	Defines rules for persistence	Implements JPA and provides ORM features	Simplifies database operations
Developed by	Oracle / Java Community (JSR 338)	Hibernate Team (Red Hat)	Spring Team
Implementation	No implementation	Actual implementation	Uses JPA implementations like Hibernate
Boilerplate Code	More code required	Less than JDBC	Very little code required
Repository Support	No	No	Yes (JpaRepository)
Query Support	JPQL	JPQL + HQL + Native SQL	Derived Queries, JPQL, Native SQL
Dependency	Only API	Depends on JPA API	Depends on JPA + Hibernate
